Oregon's Weekly Surveillance Summary  
Novel Coronavirus (COVID-19)

Oregon Public Health Division

Published June 10, 2020

## Background

COVID-19 Weekly Report data will be finalized every Sunday at 11 p.m. PDT, and the report will be published on Wednesday. **Please note that the data reported here are continually being updated. For daily up-to-date information visit the [OHA COVID-19 web page](#).**

As of 11 p.m. on Sunday, June 7, there have been 4,922 cases of COVID-19 reported to the Oregon Health Authority. Of these cases, 147 (3.0%) are presumptive cases. Presumptive cases are people without a positive PCR test who have COVID-19-like symptoms and had close contact with a confirmed case. Though not confirmed by a positive diagnostic test, presumptive cases have a high likelihood of having COVID-19 because of the specific nature of the symptoms and known exposure. Presumptive cases are encouraged to seek testing to confirm that they do have COVID-19. Presumptive cases who test positive are recategorized as confirmed cases.

Not all cases have been interviewed at the time of this report. These data represent a snapshot of COVID-19 risk factors, clinical and demographic characteristics and include data on cases with pending investigations. The data shown in this report come from Orpheus, which is an electronic disease surveillance system for reportable diseases for the state of Oregon.

During the week of June 1–7, 18,271 persons were tested for COVID-19 in Oregon and 2.9% of those people had a positive result. These represent tests done at all locations, including commercial non-hospital-based laboratories, hospital laboratories and Oregon State Public Health Laboratory. At present, Oregon has the capacity to test 3,150 specimens per day (22,050 per week) at Oregon State Public Health Laboratory and clinical labs in the state. Reported testing is well below capacity, considering that this figure does not include the unknown additional capacity for testing by commercial laboratories.

## Weekly Report Summary

During the week from Monday, June 1, through Sunday, June 7, OHA recorded 620 new cases of COVID-19 infection, a 75% increase from the previous week (353 new cases). In addition, 10 Oregonians were reported to have died. Statewide, cumulative reported COVID-19 cases have reached 4,922 (11.4 cumulative cases per 10,000 Oregonians) and 164 people (0.4 cumulative deaths per 10,000 Oregonians) are known to have died with COVID-19 since the beginning of the outbreak.

Newly reported COVID-19 cases increased by 75% during the week ending June 7 after increasing by 18% during the previous week. The number of COVID-19 tests\* reported (18,271) increased only slightly compared to the preceding week while the percent positive rose from 1.9% to 3.0%. The number of new infections reported daily approached levels seen during the heights of the outbreak. Fortunately, hospitalizations and deaths are far below their peaks, and the percentage of emergency department visits for COVID-19-like illness remain below 1%.\*\* Large workplace outbreaks (Table 6) account for much of the recent increase, however some counties without large outbreaks have also experienced increases.

We are watching these trends closely as much of Oregon continues to reopen. OHA and local public health authorities have strengthened their workforce and infrastructure to ensure increased case investigation, contact tracing and support for people who need to isolate or quarantine. State and local officials will continue to emphasize the critical importance of maintaining physical distance, limiting in-person gatherings and wearing face coverings where physical distancing is difficult or impossible.

Novel Coronavirus (COVID-19)

Oregon Public Health Division

Published June 10, 2020

Table 5 lists active clusters of three or more cases or one or more death in care facilities, senior living communities, and other congregate living setting. Fourteen facilities (one more than last week) have active clusters, involving over 201 total patients (up from 178) patients.

Recent data on mortality in Oregon, including deaths related to COVID-19, are available at <https://public.tableau.com/profile/oha.center.for.health.statistics#!/>

\*Includes polymerase chain reaction (PCR) for viral RNA. Does not include antibody tests or tests for viral proteins known as antigen tests.

## Clinical Characteristics, Risk Factors and Demographic Characteristics

Figure 1 provides information on signs and symptoms from all COVID-19 cases. Of all 4,922 cases, 79.9% (n=3,898) reported having signs and symptoms of COVID-19. The two most commonly reported symptoms are cough (n=2,959, 60.1%) and headache (n=2,261, 45.9%). Figure 2 provides information on risk factors from all COVID-19 cases. The two most common risk factors are having contact with a known COVID-19 case prior to symptom onset (n=3,055, 62.1%) and having underlying medical conditions (n=2,573, 52.3%). It is important to note that each person may report more than one sign/symptom or risk factor.

Figure 2. Reported risk factors from all COVID-19 cases (n=4,922)

\*Congregate living situations include, but are not limited to, long-term care facilities, group homes, prisons, and shelters. Data include people with confirmed cases who live or work in congregate living situations.

\*\*Direct patient care is only asked if a case is a healthcare worker or volunteer. The denominator is the number of healthcare workers or volunteers.

\*\*\*Underlying medical conditions include cardiovascular disease, chronic liver disease, chronic lung disease, chronic renal disease, current or former smoker, diabetes mellitus, immunocompromised condition, neurologic and neurodevelopmental conditions, obesity, or other chronic diseases.

The following tables show the demographic characteristics for all COVID-19 cases. Table 1 and 2 shows case demographic distribution. Tables 3 and 4 show race and ethnicity respectively.

Table 1. Severity and rates of COVID-19 by sex (n=4,922)

## Recovery

OHA staff periodically call people with reported cases of COVID-19 who experienced fever, cough, shortness of breath or diarrhea and were initially interviewed before May 1, when OHA changed its definition of recovery, to inquire about resolution of symptoms. This group includes 1,882\* people who were all diagnosed before mid-April and have not succumbed to their illness. Among these, 1,627 (85.9%) of cases are considered recovered, and a recovery date is available for 1,368 people. It is this group of 1,368 for which recovery times are depicted in Figure 3. Of these 1,882 people, 60 (3.2%), have yet to recover, and current recovery status is not yet available for 195 (10.3%) of these cases. People are assumed to have recovered three days after resolution of all symptoms. The median time to recovery among non-hospitalized symptomatic cases is presently 20 days (interquartile range: 15–29 days); among symptomatic cases who were hospitalized it is 25 days (interquartile range: 18–37 days).

\*Case counts have decreased from 1894 to 1882. This is because this case count excludes people who have died. Onsets may also have been updated when OHA staff call and ask them about their illness

\*Three days after reported resolution of diarrhea, cough, shortness of breath and fever.

\*\*Includes cases who were interviewed about their date of recovery before a change in recovery definition on May 1

## Weekly Care Facility, Senior Living Communities and Congregate Living Settings Report

OHA is publishing data on cases and deaths in care facilities, senior living communities, and congregate living settings that have three or more confirmed COVID-19 cases or one or more death. Facilities with outbreaks that are considered closed are removed from this list. An outbreak is considered closed if there are no new cases identified for 28 days after the last case onset. This list does not include correctional facilities.

In addition to the facilities listed, OHA is aware of three adult foster homes that have three or more confirmed COVID-19 cases or one or more death. Because foster homes typically have relatively few residents, OHA follows the Oregon Department of Human Services practice in not naming these locations to protect privacy.

To date, there has been 1 COVID-19 death of a staff person who worked in a congregate care setting. To protect patient privacy, OHA does not report employee deaths by workplace or other potentially identifying information. Similar information will only be released in the future in weekly reports if OHA determines that such information, in addition to other information it releases, and information released by other agencies, like the Centers for Medicaid and Medicare, cannot be used to identify an individual.

## Weekly Workplace Outbreak Report

OHA is publishing data on cases in workplace outbreaks. A workplace outbreak is defined as two or more COVID-19 cases that work in the same location, have an epidemiologic link and have symptom onset or positive test within 14 days of each other. Any suspected workplace outbreak is required to be reported to the local public health authority (see OAR 333-018-015). Local health department and tribal partners conduct ongoing public health investigations to identify workplace outbreaks. This list of outbreaks will be updated as investigations continue, and we learn about epidemiologic links between cases. This list may not reflect all the workplace outbreaks in Oregon.

In order to protect privacy, OHA is only reporting workplace outbreaks with 5 or more cases and only for workplaces where there are at least 30 employees. If more than 50% of the employees are COVID-19 cases, then we will not report specific case numbers. Case counts include all persons linked to the outbreak, which may include household members and other close contacts. The list below includes active workplace outbreaks (Table 6), meaning that there has been a case within the past 28 days. Outbreaks that are resolved will be moved to a separate table of resolved outbreaks (Table 7).

The presence of correctional facilities and food packing and agricultural worksites on this list highlights the challenges of controlling COVID-19 in settings where people must work or live in close proximity. In addition, people of color are overrepresented in agricultural and correctional settings, perhaps contributing to higher rates of COVID-19 observed in these groups. OHA publishes these data in response to public request, but with some concern that workers or staff members at these workplaces might be subject to discrimination.

State and local public health officials work intensively with staff at workplaces where outbreaks are identified to isolate sick workers, test and quarantine those who have been exposed and implement workplace changes to reduce risk of transmission. Unless otherwise noted, public health officials have determined that these workplaces, their employees and their products do not pose significant risk to the public. Employees of a business with a workplace outbreak should never be subjected to discrimination or excluded from patronizing other businesses. In fact, discriminating against employees or avoiding products might jeopardize the economic viability of essential local businesses.

Employers can support their employees with policies that make sure that ill workers are not in the workplace and are not penalized for taking sick leave. Employers should ensure that workers are aware of and understand these policies.

There have been 7 COVID-19 deaths associated with the workplace outbreaks below. To protect patient privacy, OHA does not report employee deaths by workplace.

## Weekly COVID-19 Hospitalizations

OHA is publishing data on the number of COVID-19 hospitalizations by hospital in the prior week; data are from Oregon's hospital capacity web system, HOSCAP. Table 8 lists all hospitals which, at some time during the week reported, had 10 or more suspected or confirmed COVID-19 patients. The left column shows the highest number of suspected and confirmed COVID-19 hospitalized patients for each hospital between 6/1/2020 and 6/7/2020. The right column shows the highest number of confirmed COVID-19 patients hospitalized during the same time period.

**Table 8. Hospitals reporting 10 or more COVID-19 patients.**

Hospital Name	Max Patients	Maximum Confirmed Patients
Salem Health Hospital	23	14
OHSU Hospital	17	<10
Providence Portland Medical Center	15	<10
Providence St. Vincent Medical Center	11	<10

The hospitals listed in Table 9 reported at least one and at most and at most 9 suspected or confirmed COVID-19 patients between 6/1/2020 through 6/7/2020. Hospitals not listed in either table did not report any suspected or confirmed patients during the week.

## Cases by ZIP Code

OHA is publishing data on cases at the ZIP code level (Table 10). In order to protect patient privacy, ZIP codes with small populations or small numbers of cases will be aggregated. Cases from ZIP codes with less than 1,000 people will be reported as one number. ZIP codes that have fewer than 10 cases will be reported as "1–9". ZIP codes that do not have any cases will have a "0". ZIP code population was retrieved from the 2010 US Census Bureau ZIP Code Tabulation Area.

**Table 10. COVID-19 cases by ZIP code**
